EVALUATION LIST – 01/10/13

More than 1600 publications annually in many languages. Currently 130 relevant outcome studies: 2 meta-analyses; 5 systematic reviews; 26 randomised controlled trials showing benefit from solution-focused approaches with 13 showing benefit over existing treatments. Of 47 comparison studies, 38 favour sft. Effectiveness data are also available from over 5000 cases with a success rate exceeding 60%; requiring an average of 3 – 5 sessions of therapy time.

In 2012 at least 100 publications were not in English (including over 60 in Mandarin from Taiwan alone) and others in Farsi, Finnish, French, German, Korean and Turkish. So this evaluation list confirms the value of the model but is no longer sufficient in itself.

META-ANALYSES

SYSTEMATIC REVIEWS

statistics / design / follow-up / numbers. Only 2 follow-up studies. Moderate or high effect size in 4 studies. Are qualified workers better than students? (jcorcora@vcu.edu)

Gingerich WJ, Peterson LT (2013) Effectiveness of Solution-Focused Brief Therapy: A Systematic Qualitative Review of Controlled Outcome Studies. Research on Social Work Practice 23(3): 266-283. All available controlled outcome studies of SFBT: 43 studies were abstracted: 32 (74%) of the studies reported significant positive benefit from SFBT; 10 (23%) reported positive trends. The strongest evidence of effectiveness came in the treatment of depression in adults where four separate studies found SFBT to be comparable to well-established alternative treatments. Three studies examined length of treatment and all found SFBT used fewer sessions than alternative therapies. The studies reviewed provide strong evidence that SFBT is an effective treatment for a wide variety of behavioral and psychological outcomes and it may be briefer and therefore less costly than alternative approaches. DOI: 10.1177/1049731512470859

PUBLISHED FOLLOW-UP STUDIES (122):

RANDOMISED CONTROLLED STUDIES (26)

Babollah B, Khadijeh AS, Abolfazl K, Noorali F. (2011) The effectiveness of solution-focused therapy on reducing behavioral problems of the elementary and brief therapy and high school students at Sari. Counseling Research And Development 10(37);7-24. Pre-test and post-test on 16 elementary and 16 high school students of City of Sari; randomly selected; assigned in 2 experimental and 2 control groups. Children received 8 one hour weekly sessions; adolescent group received 8 1.5 hr weekly sessions. Results indicate that the solution-focused therapy method was effective on reduction the behavioral problems (externalizing) of children and adolescents.

Cockburn JT, Thomas FN, Cockburn OJ (1997) Solution-focused therapy and psychosocial adjustment to orthopedic rehabilitation in a work hardening program. Journal of Occupational Rehabilitation 7:97-106. 25 experimental: 6 sft sess vs 23 controls: standard rehabilitation. 68% experimental at work within 7 days at 60-day follow-up vs 4% controls. (f.thomas@tcu.edu)

Froeschle JG, Smith RL, Ricard R (2007) The Efficacy of a Systematic Substance Abuse Program for Adolescent Females. Professional School Counseling 10:498-505. 32 exp / 33 controls; pre-test post-test design. 16 wkly sft group / action learning / mentoring. Drug use, attitudes to use, knowledge of drugs, home and school behaviour all improved significantly. (jefroeschle@msn.com)

Grant AM (2012) Making Positive Change: A Randomized Study Comparing Solution-Focused vs. Problem-Focused Coaching Questions. J Systemic Therapies 31(2): 21-35. Random: 225: real problem and set a goal. Measures: positive and negative affect, self-efficacy, goal attainment. 108 problem-focused coaching questions; 117 solution-focused questions including the Miracle Question; then second set of measures. Both effective in enhancing goal approach; solution-focused group significantly greater increases in goal approach, positive affect, decreased negative affect, and increased self-efficacy; and generated significantly more actions steps to help them reach their goal. Although real-life coaching conversations are not solely solution-focused or solely problem-focused, agents of change should aim for a solution-focused theme.

Harris MB, Franklin C (2009) Helping Adolescent Mothers to Achieve in School: An Evaluation of the Taking Charge Group Intervention. Children and Schools 31(1): 27-34. Randomised, 33 exp / 40 comparison. Taking Charge group programme added to usual school. Significant posttest improvement in attendance, grades, social problem-solving and coping. Less drop out:3%/20%. (Two smaller studies (n=46, n=23) replicate these findings). (CFranklin@mail.utexas.edu)

Javanmini L, Kimiaeel SA, Abadi BAGH (2013) The Study of Solution-Focused Group Counseling in Decreasing Depression among Teenage Girls. International Journal of Psychological Studies 5:1 doi:10.5539/ijps.v5n1p105. All teenage girls in Sahneh, Iran: 20 girls chosen by stratified random sampling and then randomly assigned to exp and control groups. BDI before and after 8 sessions group counseling vs 'irrelevant' skills teaching; again 1 mon after. Reduction in BDI score significant 0.01 at follow-up. (alma_javan@yahoo.com)

Knekt P, Lindfors O (2004) A randomized trial of the effect of four forms of psychotherapy on depressive and anxiety disorders: design, methods and results on the effectiveness of short-term psychodynamic psychotherapy and solution-focused therapy during a one-year follow-up. Studies in social security and health, no. 77. The Social Insurance Institution, Helsinki, Finland. Randomised comparison study; 93 sft / 98 short-term psychotherapy; problems >1 yr. Sft 43% (mood), 26% (anxiety) recovery at 7 mon maintained at 12 mon; short-term 43%, 35%; no significant difference between therapies but sft faster for depression; short-term better for ‘personality disorder’. Avg sft 10 sess over 7.5 mon; short-term 15 sess over 5.7 mon. No figures for partial recovery; no apparent social class difference. (www.kela.fi/research)

Knekt P, Lindfors O, Härkänen T, Välikoski M, Virtala E, Laaksonen MA et al. (2008). Randomized trial on the effectiveness of long-and short-term psychodynamic psychotherapy and solution-focused therapy on psychiatric symptoms during a 3-year follow-up. Psychological Medicine, 38, 689-703. 326 psychiatric outpatients with mood or anxiety disorders randomly assigned to sft (10 sessions over 7.5 months), short-term psychodynamic therapy (18.5 sessions over 5.7 months) or long-term psychodynamic therapy (232 sessions over 31.3 months). All three treatments were effective, but auxiliary treatments frequent. At 3-year follow-up, effect sizes for sf .81-.87 for depression and .60-.80 for anxiety symptoms. Short-term psychodynamic produced
greater depression and anxiety reduction than long-term during first year; sf more depression reduction than long-term during first year. At 3 years, the improvements of both brief therapies still persisted; long-term psychodynamic patients (undergoing continuing therapy) kept improving and outperformed the brief therapies on anxiety, not on depression.

Knekt P, Lindfors O, Virtala E, Härkänen T, Sares-Jäske L, Laaksonen MA (2012) The effectiveness of short- and long-term psychotherapy during a 7-year follow-up. European Psychiatry 27, Supplement 1,1-x. 326 cases; long (7 yr) follow-up. A reduction in psychiatric symptoms and improvement in work ability and functional capacity was noted in all treatment groups. The short-term therapies were more effective than long-term psychotherapy during the first year, whereas long-term therapy more effective after 3 yrs follow-up. No notable differences in symptoms or working ability were observed between long- and short-term therapies during the last 4 years of follow-up. A total of 80% of the patients in short-term groups and 60% in long-term group used auxiliary treatment. Psychoanalysis was the most effective at 5-year follow-up. Cost-efficiency analysis including social and unemployment costs showed that long-term therapy cost three times as much.

Lindforss L, Magnusson D (1997) Solution-focused therapy in prison. Contemporary Family Therapy 19:89-104. 2 randomised studies: (1) Pilot study 14/21 (66%) exp. and 19/21(90%) controls reoffended at 20 mon. (2) 30 experimental and 29 controls; 16 mon follow-up. 18 (60%) reoffend in exp., 25 (86%) in control; more drug offences and more total offences in controls. Avg 5 sess; 2.7 million Swedish crowns saved by reduced reoffending. (lindforss@chello.se; dan.magnusson@brottsforebygghanderadet.se)

Nystuen P, Hagen KB (2006) Solution-focused intervention for sick-listed employees with psychological problems or muscle skeletal pain: a randomised controlled trial. BMC Public Health 6:69-77. Long-term sickness: randomised: 53 exp / 50 controls; 8 sess; 1 yr follow-up. No significant difference in return to work; mental health scores significantly improved. Authors question sample size and chosen measures. (pal@psykologbistand.no; kare.hagen@diakonsyk.no)

Saffarpour S, Farahbakhsh K, Shafiabadi A, Pashasharifi H. (2013) A comparison between the effectiveness of solution-focused brief therapy and the quadripartite model of social competence and a fusion model of these two methods on increasing social adjustment of female students residing in Tehran dormitories. Journal of Applied Social Psychology DOI: 10.1111/j.1559-1816.2013.01036.x 60 patients, randomised to 3 exp and 1 control groups. All 3 treatment methods were effective; no significant differences were observed between solution-focused and quadripartite model; combination model exhibited superior efficacy.

Schade, N., Torres, P. & Beyebach, M. (2011). Cost-efficiency of a brief family intervention for somatoform patients in primary care. Families, Systems, & Health, 29-3, 197-205. 256 somatoform patients from 7 Family Health Centers in Chile randomized to control (TAU) or exp (Brief Family Intervention, mainly sf). All staff of exp at least 40 hours of training in sf, MRI & externalization. BFI patients higher on consumer satisfaction than controls. BFI reduction in total
health costs, cost of medication, of medical visits and of complementary medical analysis at termination and 1-year follow-up (all p< .005). Effect size of total cost reduction d= .80. Average 3 sessions.

Thorslund KW (2007) Solution-focused group therapy for patients on long-term sick leave: a comparative outcome study. Journal of Family Psychotherapy 18(3):11-24. Randomised 15 exp / 15 control; 1-5 mon sick. 8 sess; increased return to work (60%(9) vs 13%(2)) and psychological health improved at 3 mon follow-up. (karin.wallgren@losningsfokus.se)

Vogelaar L, van’t Spijker A, Vogelaar T, van Busschbach JJ, Visser MS, Kuipers EJ, van der Woude CJ (2011) Solution focused therapy: A promising new tool in the management of fatigue in Crohn's disease patients: Psychological interventions for the management of fatigue in Crohn's disease. J Crohn's and Colitis. doi:10.1016/j.crohns.2011.06.001 29 patients; quiescent Crohn's disease; high fatigue score; 72% female; mean 31 yrs. Randomized to Problem Solving Therapy (PST), Solution Focused Therapy (SFT) or to controls (treatment as usual, TAU). SFT group improved on fatigue scale 85.7% of patients; PST group 60%; TAU group 45.5%. Medical costs lower in 57.1% SFT; TAU 45.5%; PST group 20%. Drop out rate highest in PST (44%; SFT 12.5%; TAU 8.3%).

Wilmshurst LA (2002) Treatment programs for youth with emotional and behavioural disorders: an outcome study of two alternate approaches. Mental Health Services Research 4:85-96. Randomised controlled study: 12 wk; 27 clients 5 day/wk residential, sft, family contact 26 hr; 38 non-resident programme, cbt, family contact 48 hr. 1 yr follow-up: Behaviour improved in both groups; ADHD behaviours better in 63% of cbt, 22% of sft; group scores better for anxiety, depression with cbt. Author suggests residential care is detrimental.

education. Pre and post evaluation by medical reply and social support. Significantly more social support and coping with illness in observation group (p>0.05).

COMPARISON STUDIES (47)

Amiri H, Sharme MS, Zarchi AK, Bahari F, Binesh A. (2013) Effectiveness of Solution-Focused Communication Training (SFCT) in Nurses’ Communication Skills. Iranian Journal of Military Medicine 14 (4): 279-286. 71 nurses from medical-surgical departments of Tehran hospital. 8 hour workshop; pre-test; post-test two months after. 3 questionnaires completed (participant, head nurse, colleagues). Mean difference statistically significant [P= 0/001]; also between mean scores of 4 subscales of nurses’ communication skills. (amirizh@yahoo.com)

Antle BF, Christensen DN, van Zyl MA, Barbee AP (2012) The impact of the Solution Based Casework Practice Model on federal outcomes in public child welfare. Child Abuse and Neglect http://dx.doi.org/10.1016/j.chiabu.2011.10.009. 4559 child welfare cases were reviewed through a CQI case review process. High levels of fidelity to the model demonstrated significantly better outcomes in the areas of child safety, permanency and well-being and exceeded federal standards. Components of Solution-Based Casework were significant predictors of these federal outcomes and accounted for variance in these outcomes better than any other casework process factors.

Bostandzhiev VI, Bozhkova E (2011) A comparative study in a Mental Health Day Center 2002-2005 (Macdonald AJ, Solution Focused Therapy: Theory, Research and Practice. Sage Publications: London 2011). 96 subjects : 41 exp / 55 controls. Group 1 (n=14; anxiety disorders, depression): solution-focused therapy without drug therapy; Group 2 (n=8): medication without psychotherapy; Group 3 (n=27): solution-focused therapy and medication (including schizophrenia, bipolar disorders, anxiety disorders); Group 4 (n=47): syncretic group therapy (recitation and discussion of problems, average 30 sessions) and medication. Groups 2, 3 and 4 included schizophrenia, bipolar disorders and anxiety disorders. Thirty-one patients (32.3%) diagnosed as schizophrenia. Avg 2.6 sess; range 1-7 Improvement measured by OQ45,GAF and client’s scaling. Group 1: 78.5% improved; Group 2: 25%; Group 3: 63%; Group 4: 19%. 15% of Group showed deterioration but none of the others. Thus 65.8% improved when solution-focused therapy was included vs 20% without. Rapid change in daily functioning for all diagnostic categories, ranging from coping with chores and family to full recovery. (See also Bozhkova E (2011) Psychology - Theory and Practice 3: 85-95 (Bulgarian; abstract in English). (mail@bozhkova.info)

(mean age 14.6) and control groups similar; 46 adolescents each. Maximum of 5 sessions. Evaluation at 6 weeks: Standardized Interview for the Evaluation of Adolescents’ Problems. 31% of treatment group significant behavior change; 29% change in somatic and cognitive difficulties. (http://dx.doi.org/10.1016/j.childyouth.2010.11.027. v.cepukiene@smf.vdu.lt; r.pakrosnis@smf.vdu.lt)

Chung SA, Yang S (2004) The effects of solution-focused group counseling program for the families with schizophrenic patients. Taehan Kanho Hakhoe Chi (Journal of the Korean Academy of Nursing) 34:1155-63 (Korean; abstract in English). 48 schizophrenic patients and 56 families; 24 patients and 28 families each in experimental and control gps. 8 group sess for experimental; significant reduction in family burden and expressed emotion vs controls.

Franklin C, Moore K, Hopson L (2008) Effectiveness of Solution-Focused Brief Therapy in a School Setting. Children and Schools 30(1):15-26. 30 exp (School A); 5-7 groups; 29 control (School B); 1 mon follow-up (43). Teachers: externalised and internalised behaviours significantly improved, students externalised behaviours significantly improved.

Franklin C, Streeter CL, Kim JS, Tripodi SJ (2007) The Effectiveness of a Solution-Focused, Public Alternative School for Dropout Prevention and Retrieval. Children and Schools 29(3):133-144. 46 exp / 39 comparison. Significantly more credits earned and more credits per time spent for exp with lower attendance rates. 81% graduation rate for exp / 90% for comparison after correcting for difference in policies. (cfranklin@mail.utexas.edu)

Gostautas A, Cepukiene V, Pakrosnis R, Fleming JS (2005) The outcome of solution-focused brief therapy for adolescents in foster care and health institutions. Baltic Journal of Psychology 6:5-14. 81 exp (44 foster / 37 health care) / 52 comparison; test battery 1-4 wk after 2-5 sess (avg 3.42). Grouped data: significant difference all measures for exp group; therapists rated 82% much improved. Scaling in keeping with standard instruments. (a.gostautas@smf.vdu.lt)

Koob JJ, Love SM (2010) The implementation of solution-focused therapy to increase foster care placement stability. Children and Youth Services Review 32(10):1346-1350. 31 adolescents with multiple placements: CBT in year 1, sft in year 2. Number of disruptions in sft year decreased from mean 6.29 (SD 3.6) to mean 1.45 (SD 0.68), p <.001.

LaFountain RM, Garner NE (1996) Solution-focused counselling groups: the results are in. Journal for Specialists in Group Work 21:128-143. Experimental 27 sft counsellors, 176 students; control 30 non-sft counsellors, 135 students. Experimental students better on 3 of 8 measures including 81% goal achievement (controls no report). Less depersonalisation and more personal accomplishment in sft counsellors at 1 yr.

Lambert MJ, Okiishi JC, Finch AE, Johnson LD (1998) Outcome assessment: From conceptualization to implementation. Professional Psychology: Research & Practice 29:63-70. 22 cases from Johnson & Shaha (1996) compared with 45 at university public mental health center. Both methods achieved 46% recovered by objective criteria (OQ-45) ('Improved' cases not reported); sft by 3rd sess, center by 26th.

Littrell JM, Malia JA, Vanderwood M (1995) Single-session brief counseling in a high school. Journal of Counseling and Development 73:451-458. 61 students; 19 problem focus and task, 20 problem focus only, 22 solution focus and task. 69% better at 6 wk follow-up in all groups but shorter sessions in sft. (jlittrel@iastate.edu)

McAllister M, Zimmer-Gembeck M, Moyle W, Billett S (2008) Working effectively with clients who self-injure using a solution-focused approach. International Emergency Nursing, 16(4): 272-279. Nurses in two Australian emergency departments completed questionnaires before and after participating in SFN training focused on working with complex clients who self-harm. A comparison group of nurses also completed questionnaires. Results indicated some benefits of the intervention; there were improvements in participants' perception that nursing is strengths oriented and in nurses' satisfaction with their skills. There were no significant improvement in nurses' reports of their professional self-concept.

Mintoft B, Bellringer ME, Orme C (2005) Improved client outcome services project: an intervention with clients of problem gambling treatment. ECOMMUNITY: International journal of mental health and addiction 3:30-40. 23 unimproved clients compared with 62 who refused further treatment and with national statistics. First session motivational interviewing and cbt, then up to 16 wks sft and self-completion booklet about goals and exceptions. 11 completed programme; improvement on all measures; numbers too small for statistics. No data on number of sessions or partial completers. (br.mintoft@auckland.ac.nz)

Pakrosnis R, Cepukiene V (2011) Outcomes of solution-focused brief therapy for adolescents in foster care and health care settings. 129 adolescents; 112 completed therapy (19% dropout); 91 controls. Maximum 5 sess; avg 3.11. Significant improvement at end of therapy for 77% foster care; 67% mental health care; 52% rehabilitation group. In Franklin C, Trepper T, Gingerich WJ, McCollum E. (eds) Solution-focused Brief Therapy: A Handbook of Evidence-Based Practice. Oxford University Press: New York 2011. (CFranklin@mail.utexas.edu; trepper@calumet.purdue.edu)

Perkins R (2006) The effectiveness of one session of therapy using a single-session therapy approach for children and adolescents with mental health problems. Psychology and Psychotherapy: Theory, Research and Practice 79:215-227. 78 exp single sess / 88 no treatment; follow-up 4 wks. Severity reduced 74.3% vs 42.5%; frequency of symptoms reduced 71.45% vs 48.3%. (ruthp@iimetro.com.au)

Rhee WK, Merbaum M, Strube MJ (2005) Efficacy of brief telephone psychotherapy with callers to a suicide hotline. Suicide and Life-Threatening Behavior 35:317-328. 55 callers completed study: sft 16, common factors therapy 17, wait list 24. Significant improvement on 10/14 measures for treated groups; no between-group differences. (merbaum@wustl.edu)

Roeden, J.M., Maaskant, M.A. & Curfs, L.M.G. (2012). Process and effects of Solution-Focused Brief Therapy with People with Intellectual Disabilities; a Controlled Study. Journal of Intellectual Disability Research. doi: 10.1111/jir.12038 Controlled: 20 people with mild ID receiving SFBT and 18 people with MID receiving care as usual (CAU). 2 of the 20 clients quit SFBT prematurely. Most clients receiving SFBT (13 of 18 clients) showed clinically relevant progressions (more than 2 points on a 1 to 10 scale) towards their treatment goals after SFBT (13 of 18 clients) and at follow-up (14 of 18 clients). Directly after therapy, the SFBT group performed statistically significantly better than the CAU group on psychological functioning, social functioning, maladaptive behaviour, autonomy, and social optimism. At 6 wks follow-up improvements in psychological functioning, social functioning, and maladaptive behaviour were still statistically significant compared to CAU, with medium to large effect sizes. (j.roeden@baalderborggroep.nl)

or teaching. Less increase in distress in exp; 23 (72%) exp reported intervention to be effective. (emma.short@beds.ac.uk)

Stoddart KP, McDonnell J, Temple V, Mustate A (2001) Is brief better? A modified brief solution-focused therapy approach for adults with a developmental delay. Journal of Systemic Therapies 20:24-41. 16/19 clients complete 8 sess; 6 mon follow-up. Therapy 118 days vs 372 days for long-term comparison group; client satisfaction similar. Better outcome if fewer problems, less developmental delay, real-life goals, self-referred. Clients often requested more sessions. (stoddart@aspergers.net)

Sundtman, P (1997) Solution-focused ideas in social work. Journal of Family Therapy 19:159-172. 9 social workers in the experimental group received basic training in solution-focused ideas while 11 controls worked as usual. Session tapes and questionnaires were analysed at 6 mon: 382 clients; 199 (52%) replied. More positive statements, more goal focus and more shared views were found in the experimental group. (peter.sundman@taitoba.fi)

Triantafillou N (1997) A solution-focused approach to mental health supervision. Journal of Systemic Therapies 16:305-328. Supervision of residential staff. 5 adolescent clients: 66% less incidents, less medication use vs 7 controls: 10% less incidents, medication increased at 16 wks. (Republished with introduction: 2011 InterAction 3(1) 46-83)

exp, of whom 38 evaluated; 21 controls. 10/38 (26%) reoffend; 12/21 (57%) controls; significant
(t=2.17, p<0.05).
06/index.html)

improve mental health and employment outcomes? Journal of Occupational Psychology,
Employment and Disability 12(1): 3-15. 82 exp up to 6 sess; 64 completed / 82 controls no
treatment. Improved mental health scores, self-esteem, expectation of ability to work on objective
measures and scaling. 41 (64%) exp moved into work or work preparation; not significantly
different from controls. (alyson.wells@jobcentreplus.gsi.gov.uk)

Wheeler J (1995) Believing in miracles: the implications and possibilities of using solution-
focused therapy in a child mental health setting. ACPP Reviews & Newsletter 17:255-261. 3
mon follow-up of 34 (traced) sft referrals and 39 (traced) routine referrals: 23 (68%) vs 17 (44%)
satisfied; other clinic resources used by 4 (12%) vs 12 (31%). (John@jwheeler.freeserve.co.uk)

combined with paroxetine in the treatment of obsessive-compulsive disorder. Chinese Mental
Health Journal, 19(4), 288-290. OCD: 30 exp / 30 controls. Paroxetine in standard dose; exp
received 6-8 sft sess. 83.3% exp vs 60% controls improved on Y-BOCS at 2 wk follow-up.
(Mandarin; abstract in English)

Zimmerman TS, Jacobsen RB, MacIntyre M, Watson C (1996) Solution-focused parenting
groups: an empirical study. Journal of Systemic Therapies 15:12-25. 30 clients, 6 sess; 12
controls no treatment. Significant improvement on Parenting Skills Inventory; no change on
Family Strengths Assessment. (lindsay@picasso.colostate.edu)

Zimmerman TS, Prest LA, Wetzel BE (1997) Solution-focused couples therapy groups: an
empirical study. Journal of Family Therapy 19:125-144. 23 exp; 6 weekly groups / 13 no-
treatment controls. Several relationship measures improved in the experimental group.

NATURALISTIC STUDIES (49)

Golfers with the Yips. Journal of Imagery Research in Sport and Physical Activity 6(1):1-16. 4
experienced golfers; multiple-baseline across participant design; solution-focused guided imagery
(SFGI) for Type I yips. Data collected during actual 9-hole matches; 5 interventions. Follow-up
12-14 wks: effect maintained. Effects on other task-specific focal hand dystonias e.g., musicians,
tennis players?

Psychology 21(1): 1-14. 3 golfers; 5 sess treatment: sf guided imagery. 3 wk follow-up showed
improvement. (robbell@bsu.edu)

Beyebach M, Rodriguez Sanchez M S, Arribas de Miguel J, Herrero de Vega M, Hernandez C,
Rodriguez Morejon, A (2000) Outcome of solution-focused therapy at a university family therapy
center. Journal of Systemic Therapies 19:116-128. 83 cases; telephone follow-up, most 1 yr +.
82% satisfied; better outcome for 'individual' problems than for 'relational'; more dropout for
trainees; avg 4.7 sess. (mark.beyebach@upsa.es)

with children with behavioural problems within the context of a Sure Start programme. Child Care
in Practice 10:63-67. 12 children; Parent Management Training and sft; detailed measures; one
mon follow-up. 5 improved; 5 borderline change; 2 (1 fostered) improved untreated.

Burr W (1993) Evaluation der Anwendung losungsoorientierter Kurztherapie in einer kinder- und jugendpsychiatrischen Praxis (Evaluation of the use of brief therapy in a practice for children and adolescents). Familiendynamik 18:11-21. (German: abstract in English.) 55 cases; follow-up avg 9 mon. 34 replies; 26 (77%) improved. Avg 4 sess; new problems reported in 4 with improvement and 4 without. (wburr@t-online.de)

Cruz J, Littrell JM (1998) Brief counseling with Hispanic American college students. Journal of Multicultural Counseling and Development 26:227-238. 16 students; 2 sess; follow-up 2 wk. 62.5% improved.

Darmody M, Adams B (2003): Outcome research on solution-focused brief therapy. Journal of Primary Care Mental Health 7:70-75. Goals, Coping Resources Inventory (CRI), client and therapist perception of session content. 20 cases; 3 mon follow-up. Overall change not significant; intrapersonal problems did better; clients saw conversation about past as more important than did therapists. (Melissa@brieftherapy.ie)

de Shazer, S, Isebaert L (2003) The Bruges Model: a solution-focused approach to problem drinking. Journal of Family Psychotherapy 14:43-52. 4 yr telephone follow-up of 131 alcoholics after inpatient episode: 118 contactable, 9 dead. 100 (84%) abstinent (60) or successfully controlled their drinking (40). 4 yr telephone follow-up of 72 alcoholics after outpatient treatment: 59 (82%) contacted: abstinent (36) or successfully controlled (23). Only relevant variable was therapy; social class was not a factor. (luc.isebaert@YAHOO.COM).

Franklin C, Biever JL, Moore KC, Clemons D, Scamardo, M (2001) The effectiveness of solution-focused therapy with children in a school setting. Research on Social Work Practice 11:411-434. 19 cases with learning problems: 7 investigated. 1 mon follow-up (objective measures); avg 7 sess. Some improvement in all; 6 of 7 better.

George E, Iveson, C, Ratner H (1990) Problem to Solution. Brief Therapy Press: London. 6 mon telephone follow-up: 41 (66%) of 62 traced were satisfied. (brief3@aol.com)

Grant AM, O’Connor SA (2010) The Differential Effects of Solution-focused and Problem-focused Coaching Questions: A Pilot Study with Implications for Practice. Industrial and Commercial Training Journal 42(2):102-111. 39 students had problem-focused coaching session with pre and post measures; then 35 of them had sf session with pre and post measures. More increase in goal approach and positive affect in sf group. (anthonyg@psych.usyd.edu.au)

Hanton P (2008) Measuring solution focused brief therapy in use with clients with moderate to severe depression using a ‘bricolage’ research methodology. Solution Research, 1(1):16-24. Depression in adults: 10 cases. Beck Depression scores pre and post therapy; post therapy interview. 7 completed data: avg improvement in BDI score 55.12%. Relationship, future focus and compliments identified as most useful; break and feedback least useful. (paulhanton@blueyonder.co.uk)

Hendrick S, Isebaert L, Dolan Y (2011) Solution-focused brief therapy in alcohol treatment. 2 studies and update of de Shazer S, Isebaert L 2003. de Stecker E: 30 subjects (60% male); median age 45; 60% live alone. Significant improvement at 1 yr: 11.93 units/day reduce to 7.76. Opperman T: 30 cases (60% male); 83% live alone. 19 (63.3%) improved: 168g/day reduce to 79; 11 in better physical health at 1 yr. In Franklin C, Trepper T, Gingerich WJ, McCoilm E. (eds) Solution-focused Brief Therapy: A Handbook of Evidence-Based Practice. Oxford University Press: New York 2011.

Johnson LD, Shaha S (1996) Improving quality in psychotherapy. Psychotherapy 33:225-236. 38 cases, OQ-45 checklist (symptoms, relationships, social role). Improvement after avg. 4.77 sess. (johnson@INCONNECT.COM)

Lee MY (1997) A study of solution-focused brief family therapy: outcomes and issues. American Journal of Family Therapy 25:3-17. 59 children; various problems; 6 mon telephone follow-up, independent raters. 64.9% improved (goal achieved 54.4%; part goal 10.5%) avg 5.5 sess. (lee.355@osu.edu)

partners) traced at 6 mon. Self-esteem and solution finding better; 16.7% cumulative recidivism over 6 yrs. Childhood abuse predicts recidivism.

Li S, Armstrong MS, Chaim G, Kelly C, Shenfeld J (2007) Group and Individual Couple Treatment for Substance Abuse Clients: A Pilot Study. American Journal of Family Therapy 35:221-233. 27 couples: 20 complete: multiple couples group 13/15; individual couples group 7/12; no significant differences between group results. 80% (43) traced at 6 mon: 46% (20) ‘a great deal better’; 49% (21) ‘helped somewhat’. (selina.li@camh.net)

Macdonald AJ (1994) Brief therapy in adult psychiatry. Journal of Family Therapy 16:415-426. 41 cases; 1 yr follow-up. 29 (70%) improved; more success if ≥4 sess; longstanding problems did less well. Equal outcome for all social classes; avg 3.7 sess. (macdonald@solutionsdoc.co.uk)

Macdonald AJ (1997) Brief therapy in adult psychiatry: further outcomes. Journal of Family Therapy 19:213-222. 36 cases; 1 yr follow-up. 23 (64%) improved; other problems solved in 10 with good outcome and 2 in the other group. Longstanding problems did less well; equal outcome for all social classes; avg 3.3 sess.

Macdonald AJ (2005) Brief therapy in adult psychiatry: results from 15 years of practice. Journal of Family Therapy 27:65-75. Further 41 cases reported; 1 yr follow-up. 31 (76%) improved; avg 5.02 sess; 20% single sess. Combined total 118; 83 (70%) improved; avg 4.03 sess; 25% single sess. Fewer new problems in good outcome group. Longstanding problems predict less improvement; equal outcome for all social classes.

Milner J, Jessop D (2003) Domestic violence: narrative and solutions. Probation Journal 50:127-141. 23 referrals; 20 cases (3 female) completed; individual or family work; 18 month follow-up. 19 (95%) not reoffend. Avg 5 sess. (judithmilner@tiscali.co.uk)

Newsome WS (2005) The Impact of Solution-Focused Brief Therapy with At-Risk Junior High School Students. Children & Schools 87:83-91. 26 preteens; improved social skills after minimum 5 of 8 group sess at 6 wk follow-up. Classroom behaviour and homework completion had also improved. (snewsome@uic.edu)
Perez Grande MD (1991) Evaluacion de resultados en terapia sistemica breve (Evaluation of results in brief systemic therapy). Cuadernos de Terapia Familiar (Family Therapy Notebooks18:93-110. 97 cases, 25% children; avg 5 sess. 71% better at end. 6-35 (avg 19) mon telephone follow-up: 81 traced. 13% relapse; 36% other problems better. More dropout if longstanding problem.

Shennan G (2003) The early response project: a voluntary sector contribution to CAMHS. Child And Adolescent Mental Health In Primary Care 1:46-50. 558 referrals; 415 families seen. 1-21 sess, avg 2.7. Telephone follow-up at 6-9 mon: 40 of 72 parents contacted. 62.5% improved; 75% report improved coping ability; avg 2.7 sess. (guyshennan@sfpractice.co.uk)

Shennan G, Iveson C (2011) From Solution to Description: Practice and Research in Tandem. In Franklin C, Trepper T, Gingerich WJ, McCollum E (eds) 'Solution-focused Brief Therapy: A Handbook of Evidence-Based Practice'. Oxford University Press: New York 2011. 4 studies. 24 clients, 6 mon-1 yr follow-up: 23 (83%) better, 1 (3%) worse. 39 clients, avg 18 mon follow-up: 31 (80%) better, 2 (5%) worse. 57 clients, 3-3 yr follow-up: 24 (59.7%) improved, 2 (3.5%) worse. 25 clients, 8 mon-16 mon follow-up: ‘best hopes’ achieved by 14 (56%), little 7 (28%), not at all 4 (16%).

Simon JK, Nelson TS (2007) Solution-Focused Brief Practice With Long-Term Clients In Mental Health Services ‘I Am More Than My Label’. Haworth Press: New York (p 135-6). 1997-8: 2 clinics, 1 psychodynamic, 1 sf. 781 cases vs 1673; 631 sessions vs 763 per therapist, so greater income from sf clinic. (jsimon14@hvc.rr.com)

Thompson R, Littrell JM (2000) Brief counseling for students with learning disabilities. The School Counselor 2:60-7. 12 students; 2 sess; follow-up 2 wk. 10 achieved 100% of goal.

Young S, Holdorf G (2003) Using solution-focused brief therapy in referrals for bullying. Education Psychology in Practice, 19(4): 271-282. 92 cases (26 single session cases excluded from analysis); one quarter from primary schools. 85 (92%) successful; avg 3.4 sess.

Ziffer JM, Crawford E, Penney-Wietor J (2007) The Boomerang Bunch: A School-Based Multifamily Group Approach for Students and Their Families Recovering from Parental Separation and Divorce. The Journal for Specialists in Group Work 32:154-164. School counsellors: 5 parents; 8 sess. Groups for parents, older + younger children. All improved at 6 mon follow-up interview. (StrongToGoOn@aol.com)
